Dear Sir

In reply to your favor of Aug 23, we have the
pleasure to send you per parcel post a copy of
our latest Catalogue of tiles, also a price list.
These prices are for the tiles only at our works,
and there should be added about 10% per cent for
packing & carriage expenses, but if you are
requiring tiles at any time which involve us of the
character of the work we shall be pleased to quote
special prices for the same delivered on
ground complete.

Yours faithfully

W. MINTON & Co.

A. C. Davis Esq.

MINTON & CO 109 GREAT-PORTLAND ST. W.

PRICES & TENDERS.

A Price List for Tiles *only* at the Manufactory is issued with this Catalogue.

NOTE 1.

In executing orders it is customary to supply a small quantity of each description of Tile in excess of what will actually cover the Space, as it invariably happens that some few Tiles are either damaged during transit, or broken by the Tile-paviour when fixing. For these additional Tiles a proportionate charge is made in the Invoice. M. H. & Co. will, when desired, furnish a tender for any given quantity, including packages, delivered Carriage Paid to any Station in Great Britain. An additional Tender can also be submitted for sending a Paviour to fix the Tiles, including Cement and other expenses. To enable M. H. & Co. to submit such Tenders, the No. of the Pattern chosen must be stated, and a Plan, with correct dimensions of the space proposed to be tiled supplied to them.

EXPORT.

Tenders are also given for Tiles for Export, including strongly bound packages, and Carriage Paid to alongside Vessel in any Port in Great Britain.

NOTE 2.

PAVING TILES.

Paving Tiles are unglazed, except when used for Church Chancels, where the traffic is very light, and an admixture of glazed and unglazed Tiles may then be adopted with safety and good effect. Glazed Tiles, are, however, better suited, and in fact actually intended for Walls and Dados, and for Mural decoration generally. The surface of Glazed Tiles is slippery, and consequently would, if laid in the Hall or other part of a Dwelling-house, be dangerous to walk upon. Moreover, if used in such places, the glaze would wear off in the most conspicuous part of these Floors, and the Tiling thus become unsightly. For better reference as to the use of Glazed Tiles for Mural Decoration, see Note 10 upon Dado and Wall Tiling.

NOTE 3.

When ordering Floor Tiles, it is essential that the No. of the Pattern chosen be clearly stated to M. H. & Co., and that a Ground-plan of the space intended to be paved, with accurate dimensions of every part written carefully upon it, including doorways or other recesses where Tiles are required to be fitted, should be furnished to them. These particulars enable M. H. & Co. to prepare a *Working Drawing* of the entire pavement, in which the Pattern chosen is arranged to the space in the most approved form. Such *Working Drawing* is also essential for counting and supplying the correct quantities of Tiles for completing the Pavement, and it further serves as a guide to the Tile-paviour in fixing every Tile in its proper place.

NOTE 4.

If a doubt is entertained by a Customer as to the adaptability of a certain Lithographic Pattern to any particular space, M. H. & Co. would, without charge, show upon paper, drawn correctly to Scale, and properly colored, the best possible arrangement which could be made of such Pattern. To enable them to do this, a Plan with correct dimensions of the space, as explained in Note 4 should be supplied to them, and the No. of the Pattern under consideration stated. It may however be observed, that almost any of the Patterns represented in this Catalogue can, without difficulty, be adapted to Halls, Passages, &c., of any width or form.

NOTE 5.

If a selection cannot be made from the Lithographic Patterns shewn in the Catalogue, *Special Designs* will be furnished by M. H. & Co. upon receiving a correct Plan of the space proposed to be tiled as explained in Note 4. It is desirable in such cases that the style of the Building be stated; and also whether the place where the Tiling is to be fixed be well lighted or otherwise. *Special Designs* are, without doubt, preferable for works of high-class character, such as Public Halls, Churches, &c.

NOTE 6.

PAVING TILES, CONTINUED. ❀ ❀ ❀ ❀ ❀ ❀ ❀

NOTE 7. The plan of forming a sunken space in Pavements in which to place a door-mat is frequently adopted, and the method of constructing this Mat-space may be thus explained. An Iron or Brass frame must be made to the proper size and shape, (say either square or oblong,) to admit of the Mat being placed within it. This Iron or Brass frame is usually about $\frac{1}{2}$ inch thick, by 3 inches deep; and when preparing the Foundations for the Pavement it should be placed in the position which it is intended to occupy.

The Tiles at the bottom of the Mat-space may be of the plainest description, as of course the Mat always covers them. When a Mat-space is required, an intimation to that effect should be made to M. H. & Co. at the time of giving the Order, and the size of the Mat should be stated to enable them to fit it in that position which may best suit the arrangement of the Pattern; and to shew it in its proper place in the Working-drawing of the Pavement.

NOTE 8. In selecting a Pavement for an open Verandah, or other place exposed to the Weather, it is well to avoid, as far as possible, those Patterns in which *plain Buff or Drab* Tiles are found, as instances have occurred where Tiles of these colors have sustained injury from damp and frost.

In the case also of Conservatory Pavements these *plain Buff and Drab* Tiles are not recommended, as the constant proximity of damp, combined with the effects of decayed foliage, is liable to stain them so as to render them unsightly and difficult to clean.

For all other Pavements, however, *plain Buff and Drab* Tiles may be freely used, being well suited thereto, and equally as durable as Tiles of any other Color.

NOTE 9. **MOSAIC PAVEMENTS.** Mosaic Pavements formed of small Ceramic Tiles or Tesseræ are prepared upon paper at M. H. & Co's Mosaic Rooms, Stoke-upon-Trent. The pattern having been selected say from illustrations on Plates 66, 67, 68 or 69 in this Catalogue or according to a special Design as suggested by Note 5; and a Plan of the space intended to be paved, with very accurate dimensions furnished to M. H. & Co. a full sized sketch of the entire Pavement is drawn upon paper upon a perfectly flat surface. The small Tiles or Tesseræ of all the various shapes necessary for forming the Design are then fitted and gummed face downwards upon the pattern as thus drawn. When dry, the Pavement is cut up into sections convenient for packing, conveyance and fixing.

The fixing of Mosaic Pavements cannot well be performed by local workmen. It is necessary that the services of experienced Mosaic fixers be obtained, and, where possible, it is advisable that trained men direct from the Manufactory be employed, as to the cost of which M. H. & Co. will be pleased to submit Tenders on application.

NOTE 10. **GLAZED DADO & WALL TILING.** The object in fixing glazed Tiles upon Walls is twofold; first, to secure a bright and permanent effect without the constant necessity of Cleaning; and secondly, to counteract the effects of damp, and otherwise prevent the many objectionable appearances ever found in the case of ordinary Plaster or Papered Walls. Wooden dados, also, are liable to injury and damage such as are never found in Tile-Work.

GLAZED DADO & WALL TILING, CONTINUED. ❀ ❀

It is very desirable, and particularly recommended, wherever possible, that Wall Tiles be fixed from Floor to Ceiling, and in such cases it is simply a question of taste as to whether the Design employed be the same all over, or a Dado effect adopted to the height say 4 or 5 feet from the Floor.

In some of the Patterns of Glazed Dado and Wall Tiling displayed in this Catalogue, a *skirting* Tile, with Moulded top, is shewn; and further, in some of the Patterns a Moulded *Capping* Tile in plain color is introduced at the top of the Dado. These Skirting and Capping Tiles can be executed in any Color desired. As a substitution for such Skirting and Capping Tiles, *plain glazed Tiles* may, at less cost, be fixed flush with the other parts of the Wall Tiling. Where, however, a *Dado only* is required in Tile-work, a Tile Capping is essential as a finish at the top of the Dado, to separate and define the latter from the Plaster or Brick Walls above.

The advantage of Glazed Tile-Dados for Halls, Corridors, Schools, Railway Booking Offices, and other Public places must be at once apparent, and cannot be too highly recommended.

M. H. & Co. manufacture very extensively the 6 x 6 *White glazed Tiles* for lining the Walls of Areas or other places where a reflection of Light, or a pure and clean effect, is desired.

In the case of Internal Angles of a Wall, the Tiles will, in themselves, form a natural juncture, but Internal Curved Angles can be supplied if required, and for such works as Hospitals, Infirmarys, Public Conveniences, etc., they are recommended and will be found most essential for Sanitary purposes.

For External Angles an Independent Beading is indispensable, and for this purpose Tile Beadings of various sizes and shapes are made.

Combination Angle Tiles for Walls, and Sanitary Base or Skirting Tiles, are also supplied. Illustrations of these will be found on Plate 73 of this Catalogue.

CHURCH TILING.

There is no purpose to which Tiles are better adapted than the decoration of the Floors and Walls of Churches. The Encaustic Tiles found in Ancient Structures appear to have been almost exclusively associated with Church decoration; and since the revival of the Art by M. H. & Co., more than 60 years ago, many hundreds of Churches have been paved or otherwise adorned with Tiles of their manufacture. The following observations upon Tiling for Churches may be worthy of consideration:—

NOTE 11.

It is customary, and without doubt correct, that the Tile paving in the Nave or West end of a Church should be subservient in effect to that used in the Chancel; or, as it may still better be described, the Tiling should increase in richness from West to East, thus securing to the Altar space the most important Pavement in the Church. There are patterns in this Catalogue appropriate, and in fact expressly adapted for Church Pavements, but in case a suitable selection cannot be made for any particular work under consideration, M. H. & Co. will be pleased to send further illustrations on application, or, if necessary, to prepare and submit a special Design, together with a Tender for the whole of the Tiling fixed complete, including every expense. To enable them to arrange such a design, it is necessary that they should be furnished with a proper ground plan, giving the exact dimensions of those

NOTE 12.

CHURCH TILING, CONTINUED.

spaces which it is intended to pave with Tiles. Particular mention may be made of the Encaustic Glazed Tiles manufactured by M. H. & Co. after antique samples, specimens of which will be submitted on application. Emblematic, Monogram, Inscription and Memorial Tiles can be introduced in Church Pavements, and Designs will be furnished on application.

NOTE 13. TILING for STEPS: (TREADS AND RISERS)—The *Treads* and *Risers* of Steps may, with considerable effect, be decorated with Tiling. Border Tiles or Texts are best adapted to Risers, whilst other appropriate patterns can be arranged for the Tread. It is essential that the *Nosing* of the Step be formed of Stone or Marble. Drawings of Tiles appropriate for Risers and Treads will be furnished on application.

NOTE 14. The superiority of Tiling and Ceramic Mosaic for the decoration of Church Walls is indisputable, and a large number of important works have been executed by M. H. & Co. Many of the published Wall Tile designs are unsuited to the purpose, and not sufficiently characteristic for ecclesiastical decoration. Special designs will be submitted on receipt of application together with plans of the spaces to be tiled and, if possible, an approximate idea of the contemplated cost.

In the case of the East Wall, it is always necessary when giving dimensions, that the depth and length of the Altar Table be stated. A special design is particularly recommended in the case of the East Wall, because a separate and distinct effect is undoubtedly preferable over the Altar Table; and where Sacred Emblems and Monograms may be introduced with considerable effect. The appearance of the Reredos may be further enhanced by the introduction of Tiles ornamented with Gold. The Lord's Prayer, Commandments, &c., are also executed in Tile-work for the walls.

A course of Memorial or Inscription Tiles may be fixed upon the North and South Walls immediately underneath the window line, and illustrations of these will be furnished on application.

NOTE 15. **FOUNDATIONS & FIXING.** Printed instructions will be furnished for the guidance of local workmen on application.

NOTE 16. **FAIENCE.** This is now very generally used and strongly recommended for the Interior and Exterior Decoration of Public Buildings, Hotels, etc., etc., and special Designs adapted to the work will be submitted on application, or, if preferred, M. H. & Co. will be pleased to carry out work to Architects' own Designs or Suggestions.

PLATE No. 79.

We give here a few new arrangements of tiling for Butchers' Shops, Dairies, &c., with a series of printed subjects introduced.

We wish to make mention of Design No. 578, in which no projecting moulds are used. The base could be supplied with a cavetto tile, thus making a good finish to the floor and leaving no place for dirt to accumulate.
